AutoCAD LT AutoCAD LT is a simplified

version of AutoCAD that is marketed as a CAD "1-2-3" program. Unlike AutoCAD which has rich features, the AutoCAD LT has a basic but capable design functionality for modeling, drafting and 2D and 3D drawing. AutoCAD Map 3D Map design AutoCAD Map 3D Map is a variant of AutoCAD LT with which a very powerful design environment is integrated. A map can be designed as a city, country, or world map, using vectors, sections, solids, and animations for realism. The map can be exported to PDF, image, and other formats. AutoCAD Map 3D Map uses

DirectX for graphics processing. The program is only available for Windows. Graphics exchange language (GEL) Graphics Exchange Language (GEL) is a C-based script language that includes many programming instructions and functions. AutoCAD supports GEL scripts and even has an extension called GELScript, the scripting system for AutoCAD, which allows GEL script manipulation from within the application. Most GEL scripts use GELScript to manipulate objects within the model. Technical support AutoCAD is available in several languages:

English, French, German, Italian, Spanish, Dutch, Japanese, Simplified Chinese, Traditional Chinese, Traditional Czech, Polish, Ukrainian, Hungarian, Norwegian, Finnish, Russian, Romanian, Polish, Brazilian Portuguese, Czech, Czech, Swedish, Norwegian, Danish, Norwegian, Finnish, Swedish, Norwegian, Portuguese, Brazilian Portuguese, Spanish, Portuguese, Romanian, Polish, Polish, Polish, English, Romanian, Polish, Chinese, Romanian, and Russian. AutoCAD LT and AutoCAD Map 3D Map support Microsoft Office 2003, 2007, 2010, 2013, and 2016. Additionally,

all versions of AutoCAD provide technical support through the AutoCAD online service system. Presentation tools AutoCAD has a "Direct Drawing" feature which lets users create a drawing by opening a presentation file in the program. With this feature, users may create and manipulate 2D vector and 3D drawings through the use of a simple user interface, whereas a separate application may be used to create and manipulate presentation files. History 2008 AutoCAD 2008 was released as the first major release of the AutoCAD product line. It included a variety of

interface enhancements, including a new

On the New Tab you must double-click on the menu icon to access the menus. On Autocad 2020 the menu icon is in the top right corner of the menu bar. Once you click on the menu icon you will have access to a full array of options. Software features The Autocad 2020 main features are: Exploring, Designing and Modelling – Layout & Modeling, Architectural Design & Construction, Land Planning, Design 2D & 3D, Landscape Architecture, Structural Design & Management, Civil &

Geomatics, Electrical & Electronics Design, Surveying & Mapping, Drafting & Assembly, Manufacturing Planning, Map & Location, Environmental Graphic Design, Web Design, Interiors, HVAC, Automotive Design, Industrial Design, Electronic Design, Consulting & Trade, Architecture & Interior Design, Graphic Design & Visual Communications, Photography, and Document Processing. New features and enhancements In Autocad 2020, all the files are managed within the Personal Catalog. This feature allows the user to easily organize their

drawings by subcategories, or the drawings within a specific subcategory. A feature called "design elements" allows you to define and access the objects in the drawings or notes, such as, elevation lines, grids and doors. Another great feature, called "picturemarker", allows you to create your own symbols. Autocad 2019's tools for modeling, layout, and drawing have been completely revamped in Autocad 2020. A number of new data management tools have been added to Autocad. User-created lines and shapes are shown in floating windows, which are the

best way to keep a large number of lines and shapes easy to select, organize, and edit. You can easily drag objects from one window to another window, and also to other views of the drawing. In a drawing, the data management system also helps you define the relationship of objects to each other, automatically creates layer and visibility settings, and updates automatically whenever objects are edited.
