single.Q: How do you tell if a path is a read only mount? I would like to detect if a system is mounted with a read only mount, and in particular if it has a particular folder mounted that way. The code below tells me if a folder is mounted read only, but what is the equivalent code for telling if a folder is mounted read only and is inside a mount (besides the mount point). The code below at least catches that a

---

directory is mounted read only (it doesn't recognize a mount point) `mount -t ext3 -o ro folder_name` A: From the man pages: `-o, --option=OPTION` Set or get an ext2/3/4 filesystem option. The available options are: [...]  
`ro: mount read-only` A: I can't reproduce what you describe, but you can try this:  
`mount | grep -q "folder_name"` This will return true if there's a directory called `folder_name` mounted

as read only. Bare (brand)  
Bare is an Australian owned brand of dark roast coffee. It was founded in December 2008. History Bare (as the brand is now known) was founded in December 2008, under the name The Dark Roast. The brand was created by Joe Ribeiro, under the guidance of Roastmaster Peter Samuel. In September 2010, the Dark Roast brand was sold to Australian Beverage Group, which is a
